

# **The value of open, authoritative, trusted transport data and information**

**Presentation to the Transport Data Knowledge Hub Open Data event, 26 July 2018,  
Wellington**

**by Keitha Booth, Independent Commentator**

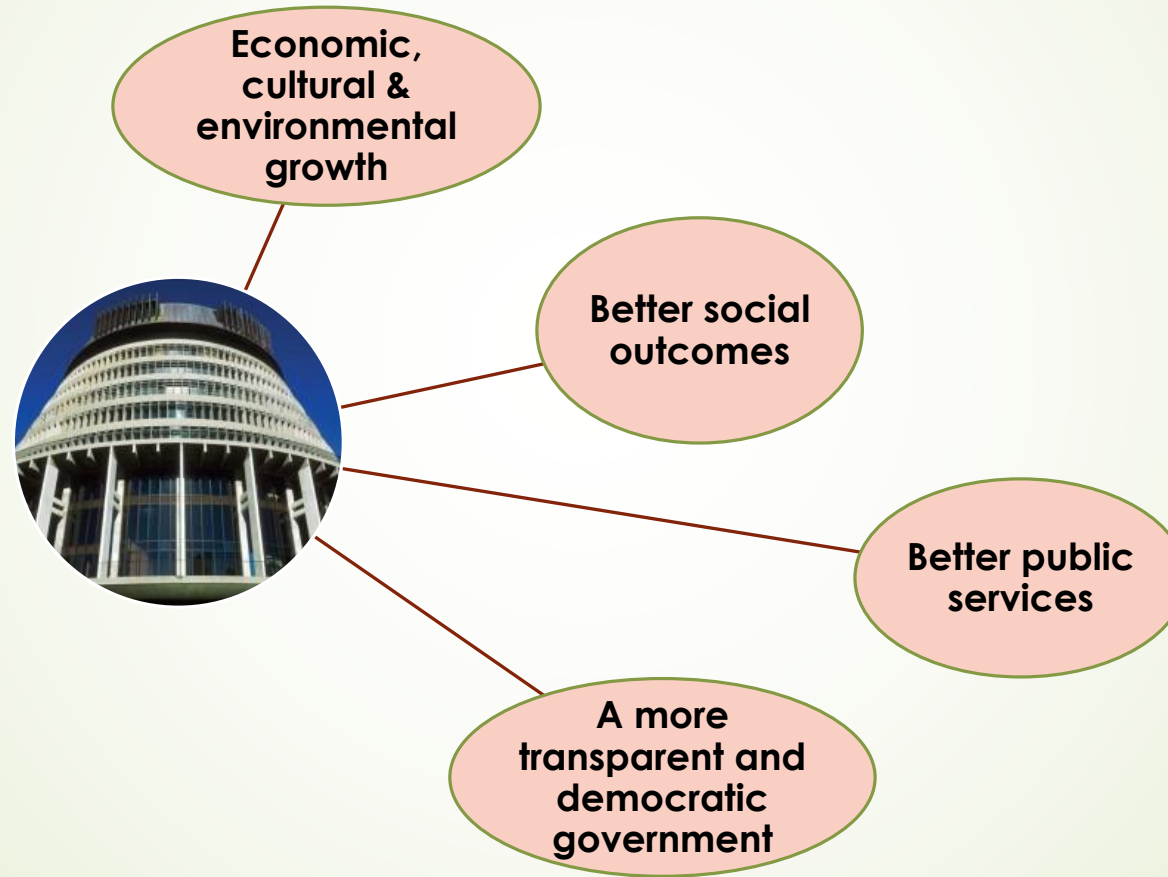

Contact: @keithabooth; keithabooth@gmail.com

# Agenda

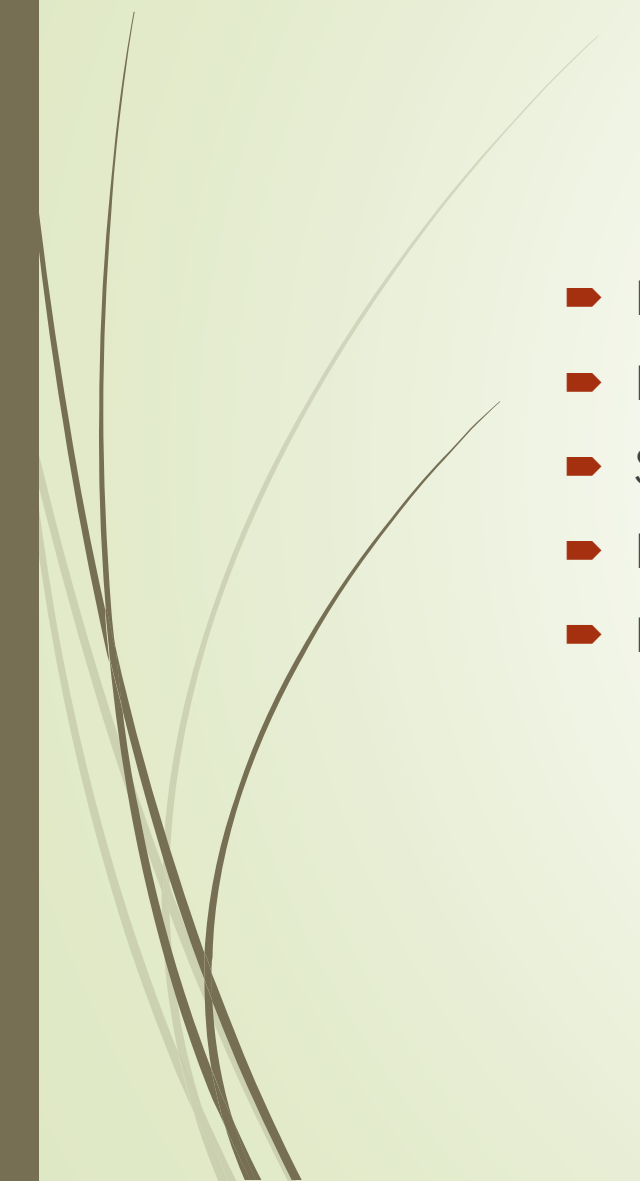

- Open data benefits
- Where to find transport open data
- Partially open or ajar transport data
- How is NZ's open data being re-used?
- How are people collaborating?
- Lets open up more transport data

# Government's expectations from open information release

# Benefits expected by NZ publishers of open transport data

- Better evidence base on which investment decisions can be made
  - Engaging and collaborating to solve important national and local issues
  - Supporting innovation
  - Exploring and downloading open data
  - Discovering and building apps, online tools and widgets
- 

Who is publishing open transport data?

## LINZ Data Service

Free online access to New Zealand's most up-to-date land and seabed data.

We provide free online access to New Zealand's most up-to-date land and seabed data.

You can search, browse for and download data online on the LINZ Data Service (LDS). You can add datasets, visualise data in your map, and crop datasets – all without the need for special software. You can also integrate our web services into your own applications.

# Auckland Transport Open GIS Data

Search for open data

## Welcome to Auckland Transport's Open GIS Data Website

We are committed to finding, implementing and supporting public transport, roading, cycling and walking path solutions to make our city a better place to live, work and play in!

This Open GIS Data Website will enable access, view, download, and use datasets of interest relating to Auckland, with the ultimate aim of stimulating the development of innovative ideas, services, apps and business propositions by the local community.

Most of the datasets are made available to you under the [Creative Commons Licence 4.0](#). If specific restrictions apply to the dataset you are interested in this will be stipulated on the download page.

# Use our data

Welcome to the NZ Transport Agency API home page, InfoConnect. InfoConnect exposes a diverse range of APIs and transport data from both within the NZ Transport Agency and its key partners.

The NZ Transport agency is continuing to develop this platform and you can expect more services to made available over time.

# NZ Transport Agency Open Data

Search for open data

The Open Data Portal is a public platform where the NZ Transport Agency shares open data. You can explore, analyse, and download data in a range of formats. Open data enables engagement and collaboration to solve important issues. Lets make great journeys to keep New Zealand moving, together!

## How to use the Open Data Portal

Search for the data you need using the filters above. You can find out more about [how to use the Open Data Portal](#), or you could choose to [see all data](#).

Roading

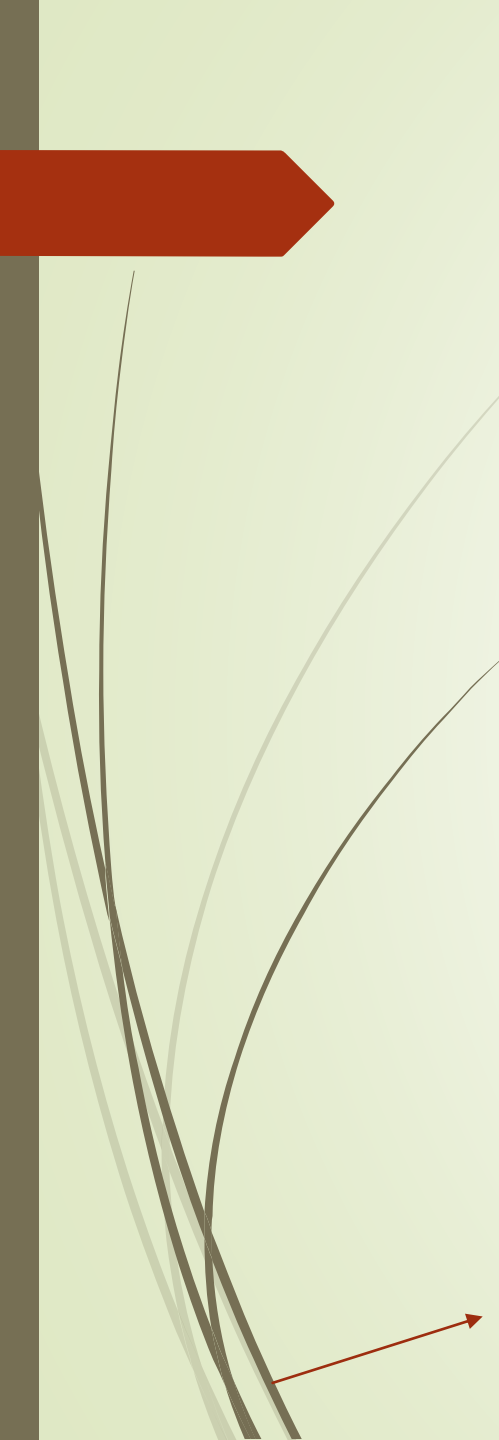

Crashes

Vehicles

Driver licences

This centreline dataset is a hybrid of both public and private data. The geometry (centreline) has been extracted from CoreLogic and the carriageways and attribution (information behind the centreline) is supplied from individual Road Controlling Authorities (RCA), or councils.

Due to the shared ownership, the centreline dataset has terms of use that need to be agreed to before downloading can occur.

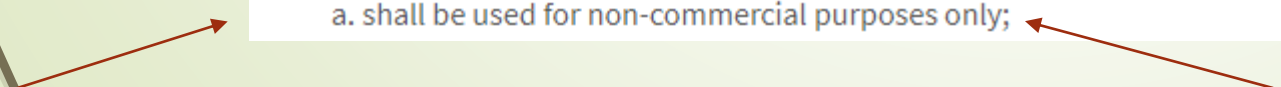

Please note: the March 2018 release holds 72% of RCA attribution as we are still awaiting agreement from some councils to share their data.

This centreline dataset will be updated monthly.

---

## Terms of use

The National Road Centreline data is made available to you on the following terms:

1. You may use the data, including making derivative works, for non-commercial purposes only.
  2. You must not use, or permit any other person to use, the data in vehicle or personal turn-by-turn real time navigation systems.
  3. You must not make the data, or any part of the data (excluding derivative works you create), available to any other person.
  4. You may make derivative works that you have created using the data available to third parties provided that such derivative works:
    - a. shall be used for non-commercial purposes only;
- 

# Search for Data

Auckland Council Open Data is a public platform where council shares data about the city we live, work and play in. Use this site to discover, explore and download council-owned datasets in a range of format.

Most of the datasets are made available to you under the [Creative Commons Licence 4.0](#). If specific restrictions apply to the dataset you are interested in this will be stipulated on the download page.

Making public transit data universally accessible.

Public transit agencies are experts at running large, complex transit networks, but they might have less experience building apps. We believe that common formats for exchanging public transit information is the solution, so third-party developers can build the innovative transit apps. These formats allow public transit agencies to publish their transit data and developers to write applications that consume that data in an interoperable way.

The following documentation provides specifications for exchanging both static and realtime public transit information, including information about stops, routes, schedule, service alerts, and other details.

### General Transit Feed Specification (GTFS)

The General Transit Feed Specification (GTFS) can be used to share *static* public transit data.

[READ ABOUT GTFS](#)

### GTFS Realtime

The GTFS-realtime Specification is an extension to GTFS that can be used to share *realtime* public transit data.

[READ ABOUT GTFS-REALTIME](#)

# Massive Google price rise off the rails, Metlink complains

Tom Pullar-Strecker • 19:37, June 19 2018

Wellington's Metlink is crying foul after Google increased the price the public transport provider will have to pay to use Google Maps from \$1000 a month, to \$30,000 a month.

Spokesman Clayton Anderson said the massive price hike was not fair and it had been given too little notice of the change, which will take effect from mid-July.

The price change is part of a global reset by Google affecting a wide range of businesses including retail chains and real estate agents.

Auckland Transport spokesman Mark Hannan said it was not impacted as it used an open-source mapping service, ESRI/Open Streetmaps.

Cost had been one of the drivers in that decision, Hannan said.

This is a sample of the NationalMap Dataset, for an area including parts of Tauranga City and Western Bay of Plenty District.

To obtain this data for the whole country it is available either on:

- a "one off" Pay-Per-Download basis from:  
[data.nationalmap.co.nz/layer/87289-road/](http://data.nationalmap.co.nz/layer/87289-road/), or
- for ongoing licensed access please visit:  
[www.nationalmap.co.nz/contact-us](http://www.nationalmap.co.nz/contact-us)

Critchlow Formed Road Network is A nationwide network of formed roads and walkways accessible to the public.

A formed road is land that has been set aside, and prepared, for vehicle traffic. The surface of the road may be sealed, or it may be rough (wheel tracks), but it must be accessible in all weather conditions by a standard, non-SUV, family type vehicle.

A walkway is land that has been set aside, and prepared, for foot traffic.

All formed roads that are named (publicly or privately owned, formally or informally named) will be represented within the Critchlow road network.

Map

A map of the Omokoroa Beach area in Tauranga, New Zealand. The map shows a coastline with a beach area labeled 'OMOKOROA BEACH'. Several roads are visible, including 'McDonnell St', 'Carpenter Ave', 'Vivian Dr', 'Harbour View Rd', 'Omokoroa Rd', 'Zine Esplanade', and 'Harbour View Rd'. The map is displayed on a light blue background representing the sea. The map interface includes a search bar, zoom controls, and a layers panel.

How are people collaborating?

Land Information New Zealand has worked with other agencies to make New Zealand's most current publicly-owned aerial imagery, covering 95 percent of the country, available under an open licence, through the [LINZ Data Service](#).

**NZ Aerial Imagery**  
LINZ / National Imagery

145585 60

Contents Metadata Services Comments (0)

The NZ Aerial Imagery basemap provides a seamless nationwide imagery layer with the newest and highest resolution data, and covers 95% of New Zealand.

This basemap has been designed to be integrated into GIS, web and mobile applications via our WMTS and XYZ tile services. View the Services tab to access these services.

## Attributing aerial imagery

Example of attributing the 'Auckland 0.125m Urban Aerial Photos (2010-2011)' layer:

*"Sourced from the the [LINZ Data Service](#) and licensed by Auckland Council for re-use under the [Creative Commons Attribution 4.0 International licence](#)."*

Or alternatively, you can use this shorter version for web applications:

*"[Sourced from LINZ. CC BY 4.0](#)" - Make sure you link to the attribution page on the LINZ website.*

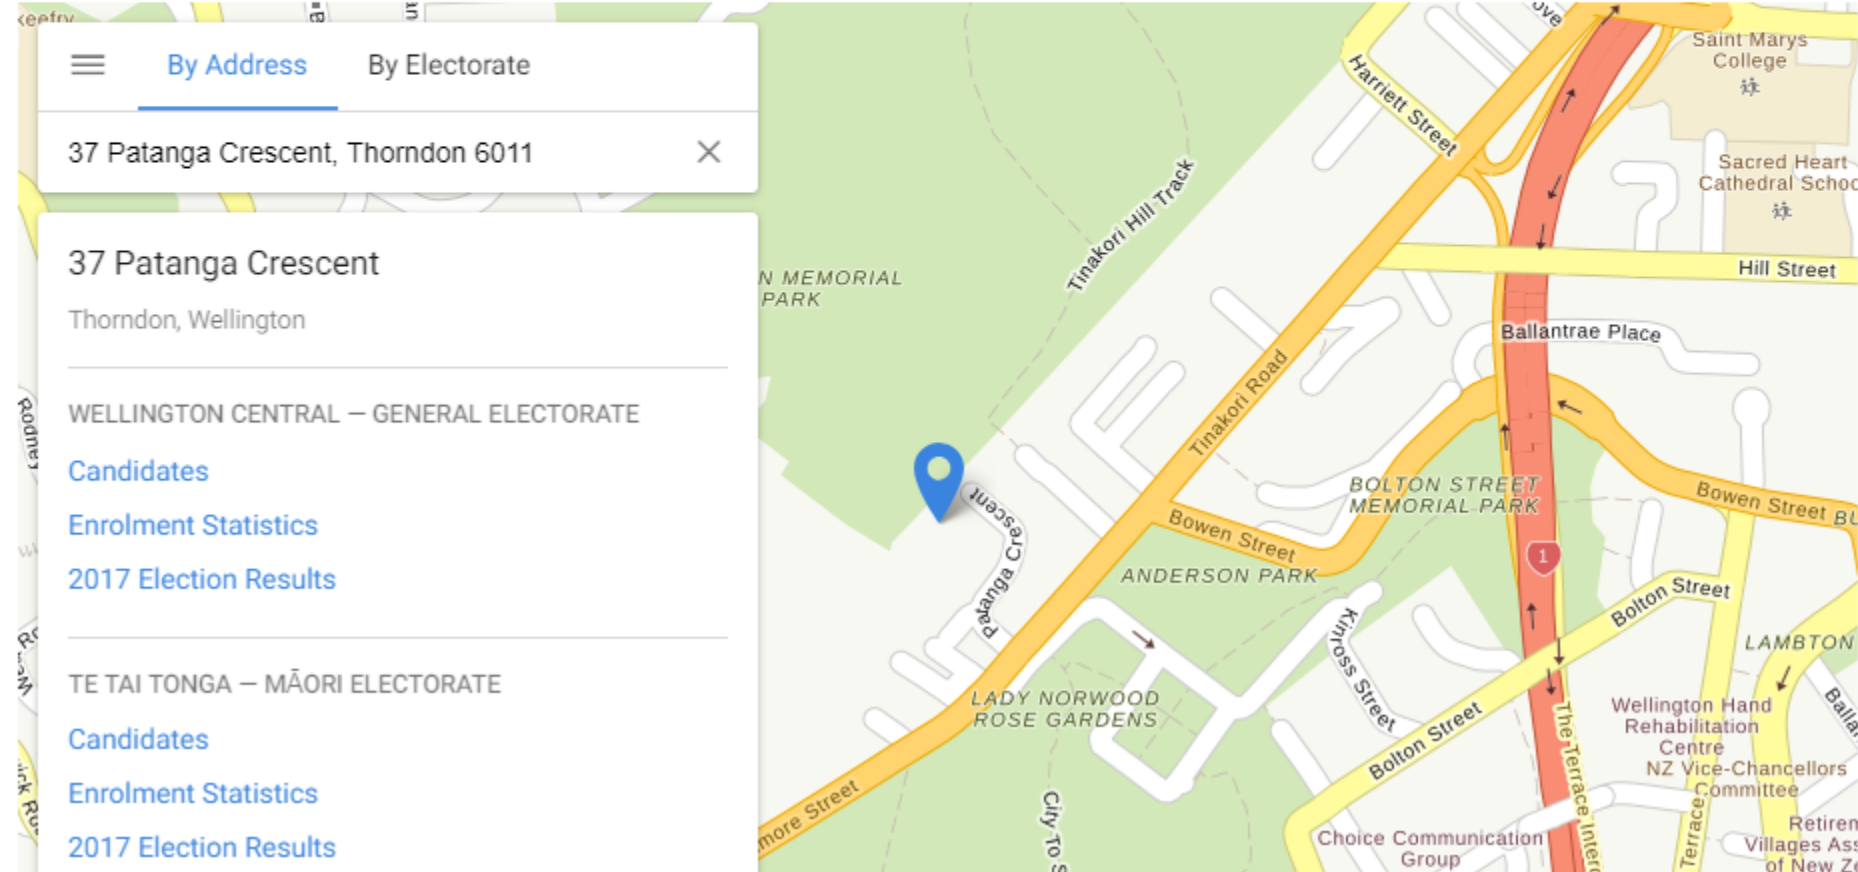

You can use the template below and insert the URL and licensee that apply to you.

*"Sourced from the LINZ Data Service (insert the URL to the layer) and licensed by (insert the licensor) for re-use under the Creative Commons Attribution 4.0 International."*

## INTERACTIVE MAPPING OF 2014 BOUNDARY CHANGES

The Representation Commission released the electorate boundaries to be used at the next two general elections.

Use the map below to see the 2014 electorate boundaries and how they compare to the 2007 boundaries (used for the 2008 and 2011 general elections).

## SUPPORT FOR THE NEW ZEALAND OCEAN DATA NETWORK

MetOcean Solutions is delighted to support the New Zealand Ocean Data Network (NZODN), a new initiative coordinated by the [National Institute of Water and Atmospheric Research \(NIWA\)](#) to make New Zealand ocean data discoverable and freely available to all.

The NZODN is a national data platform that supports integrated access to marine and climate science data. NIWA has set up the NZODN as a node of the Australian Ocean Data Network (AODN) fully built on the services stack designed by the [Australian Integrated Marine Observing System \(IMOS\)](#).

The [NZODN website](#) has been launched as a public New Zealand resource, a 'sister site' to the [AODN portal](#). This platform will greatly enhance data discovery and provide access to all available marine data collected in the New Zealand ocean domain.

# Let's find smarter ways forward

Uber Movement provides anonymized data from over two billion trips to help urban planning around the world

▶ [Watch how Movement works](#)

[EXPLORE CITY DATA](#)

# Lets collaborate to open up more transport data

- Open standards will give you lots of options
- Retaining copyright ownership means you own the outputs
- Open licensing allows others to create new products and knowledge
- Allowing commercialisation of your data encourages market growth
- Offering raw data as well as visualisations allows automated re-use
- Pragmatism about open and proprietary products may be necessary
- Financial or project management incentives kickstart collaboration
